

Helmet Communications

Gecko manufacture a radio communication headset that fits onto your Gecko helmet and can be made with a wide variety of connectors to suit a range of different VHF handheld radio makes and models. The headset unit simply pushes into the ear insert on your open face or full face helmet and the communication system is activated by pushing the red switch on the ear piece.

If you wish to use radio communications alongside a cut away helmet, either contact one of our partner companies for custom made communications integrated ear defenders, or simply wear a Gecko sea comm headband under your cut away helmet which also fits the Gecko headset.

We recommend using your Gecko headset with Icom radios and we stock a limited range of their handheld VHF radios in our shop.
